

RESETTING OF CIRCUIT BREAKERS

SUGGESTED PROCEDURES

Embraer

Embraer have issued an Operational Bulletin that goes into more detail as to the risks of resetting CB's but the following is a recap of their policy.

“If the lost system is necessary to the continuation of the flight, proceed :

Affected Circuit Breaker.....REARM

A second rearm of the same circuit breaker must not be done. In this case, the flight may be continued, depending upon the crew evaluation as regards the airplane conditions.

If the lost system does not effect the continuation of the flight, do not rearm the circuit breaker. In both cases, report to the maintenance personnel.
