

ATC/O/SI 02/08**COVENTRY ATS FREQUENCY CHANGES****1. General**

- 1.1 In order to provide increased Designated Operational Coverage (DOC) for Coventry's ATS frequencies and to reduce co-channel interference it is necessary to change three existing frequencies.

2. Application

- 2.1 Between 0800 and 0900 UTC on 8 May 2008 the following changes will be made:

TWR – currently 124.800 – will change to 118.175MHz (DOC 25nm, 10,000ft)

RAD – currently 122.000 – will change to 123.825MHz (DOC 40nm, 15,000ft)

Note: Splitting from the night time band boxing on 119.250 cannot take place until the frequencies have been changed over.

- 2.2 At a future date APP – currently 119.250 – will change to 136.150MHz (DOC 40nm, 15,000ft), however, this change is dependent on a French user moving to a different frequency and they are currently experiencing technical problems with the change. A further SI will be issued when this change takes place.
- 2.2 These changes are promulgated in the AIRAC cycle 5/2008 dated 8 May 2008.
- 2.3 A circular letter will be sent to local users, flying clubs and airfields in the area.
